IMPACT

Getting Started

- REST API Fundamentals
  - https://developer.cisco.com/learning/modules/rest-api-fundamentals/
- Presentation
  - https://github.com/rickbauer9482/IMPACT2022-Presentation

Cisco**IMPACT**

REST API
Concepts

Cisco **IMPACT**

What the heck are REST APIs?

- API (Application Programming Interface) – how two applications can communicate a contract of request responses.

- REST (Representational State Transfer) – is a set of architectural constraints or criteria that can be implemented as needed.

Cisco **IMPACT**

Anatomy of the Uniform Resource Identifier (URI)

- URI – represents a resource

https://maps.googleapis.com/maps/api/geocode/json?address=sanjose

Protocol | Server or Host | Resource | Query Parameter

Cisco**IMPACT**

API Headers

Header	Example Value	Purpose
Content-Type	Application/json	Format of the data in the body
Accept	Application/json	Requested format for the returned data such as json or xml
Authorization	Bearer Token Basic OAuth 1.0/2.0	Provide credentials like a time based token, to authorize the request
Date/Time Stamp	Mon Aug, 29 16:30:23 PST 2022	Data and time of a request or response

Cisco **IMPACT**

HTTP Methods

- HTTP Verbs correspond to CRUD actions: Create, Read, Update, Delete

POST	Create
GET	Read
PUT	Update
PATCH	Update
DELETE	Delete

Cisco **IMPACT**

HTTP Response Codes

Status Code	Status Message	Meaning
200	OK	All Good
201	Created	New Resource Created
400	Bad Request	Request was invalid
401	Unauthorized	Auth missing or incorrect
403	Forbidden	Request not allowed
404	Not Found	Resource not found
500	Internal Server Error	Something wrong on Server
503	Service Unavailable	Server not able to complete request

Cisco **IMPACT**

Lets get to know curl!

- https://everything.curl.dev/

- Very good for API Testing

- **curl** is a CLI tool to transfer data from or to a server, using one of the supported protocols (HTTP, HTTPS, FTP, FTPS, GOPHER, DICT, TELNET, LDAP or FILE)

- Over 200 command-line options

- HTTP Methods; GET, POST, PUT, and PATCH

- It defaults to the HTTP GET Method

Cisco **IMPACT**

curl Example

curl -k -i -c cookies.txt \

-H "accept: application/json" -X GET https://$REST_HOST/restconf/data/v1/cisco-customer:customer --user root:Public123

-k allow insecure server connections

-i include the response headers could use -v verbose too

-c Cookies file

-H Headers

-X Custom request (GET, HEAD, POST, PUT) don't really need requests have verb built in

-d Data

Cisco **IMPACT**

JSON and XML Payloads

Cisco **IMPACT**

What is a Data Model?

A data model is a well understood and agreed upon method to describe "something".

For example, here is a "data model" for a person.

- *Person*
  - **Gender** - male, female, other
  - **Height** - Feet/Inches or Meters
  - **Weight** - Pounds or Kilos
  - **Hair Color** - Brown, Blond, Black, Red, other
  - **Eye Color** - Brown, Blue, Green, Hazel, other

Cisco **IMPACT**

JSON

- The object is an unordered set of name-value pairs.

- An object begins with { (left brace) and ends with } (right brace)

- Strings are wrapped with " (double quotes)

```
1   {
2       "ietf-interfaces:interface": [
3         {
4             "name": "GigabitEthernet1",
5             "description": "This interface is MGMT",
6             "type": "iana-if-type:ethernetCsmacd",
7             "enabled": true,
8             "ietf-ip:ipv4": {
9               "address": [
10                {
11                  "ip": "172.30.1.200",
12                  "netmask": "255.255.255.0"
13                }
14              ]
15            },
16            "ietf-ip:ipv6": {}
17         }
18   }
```

Cisco **IMPACT**

XML

- XML stands for eXtensible Markup Language, and XML is designed to store and transport data.

```
1   <interfaces xmlns="urn:ietf:params:xml:ns:yang:ietf-interfaces"  xmlns:if="urn:ietf:params:xml:ns:yang:ietf-interfaces">
2       <interface>
3           <name>GigabitEthernet1</name>
4           <description>This interface is MGMT</description>
5           <type xmlns:ianaift="urn:ietf:params:xml:ns:yang:iana-if-type">ianaift:ethernetCsmacd</type>
6           <enabled>true</enabled>
7           <ipv4 xmlns="urn:ietf:params:xml:ns:yang:ietf-ip">
8               <address>
9                   <ip>172.30.1.200</ip>
10                  <netmask>255.255.255.0</netmask>
11              </address>
12          </ipv4>
13      </interface>
```

Cisco**IMPACT**

Join us on Oct 18th for the Develop Conference

- Free, virtual event!

- All-star speaker line-up representing the cutting edge of software & app development.

- Get inspired by the latest in API trends, application performance, security best practices & more!
cs.co/developwithcisco

This is an event for enterprise software developers and is part of the Cisco Developer Event Series.
The Developer Technical Advisory Group (TAG)

Bring your experience supporting customers and partners to Developer Relations and guide us to build impactful content, and create useful tools for our community

Cisco**IMPACT**

Cisco Developer Relations at Impact!

We want your feedback!

Answer a few questions in a short survey and be entered to win!
